Dust Collectors

Airblast surface preparation equipment offers the major benefit of being dust free in operation when connected to one of our dust collectors.

This factor is very important it expands the possibilities, and application fields where our equipment can be used, especially in areas where dust would not be tolerated, or where the dust could have hazardous implications.

We have developed a range of dust collectors with specific characteristic to work to their optimum performance, and also to employ absolute HEPA filters for total safety when used on hazardous materials.
